HKMA CMS 5.0
New Interface roll out with new functions

What's new?

- HKMA CMS 5.0 is a completely new design based on updated technical infrastructure and programming language
- It is now a web-based clinical system being accessed from your browser without any client installation. That means it is Windows & Mac compatible as well as mobile devices such as iPad running the supported browser software.
- A visualized database is provided in the consultation page to help the ease of searching for diagnosis and clinical findings.
- Improved billing system to allocate patients in categories and receives automatic discounts upon checkout.
- Daily payment summary is added for cashier's day-end routine.

What's new (cont'd)

- A new Nursing module adds procedure items and on-site medication administration record, with nurses being able to add ad-hoc nursing items pre & post consultation.
- Injection & Vaccination modules are added to track injections and vaccines administered by the clinic.
- Reminder module to set & send notifications to patients via email or SMS, with ability to setup programs for vaccine scheduling.
- The new Drug inventory now tracks every LOT of stock-in items, with new user configurable settings on stock deduction principles and unit conversion.
- New reports are added including Consent Form, Referrer Summary, DD Dispense Record, and eHR consent patients report.
